

## Grading Explanation

- Each question provides single or multiple options (A, B, C, D, E, F, ...).
- The score for each question is calculated as:

$$\text{Score} = (\text{Number of correct options selected} \div \text{Total number of options}) \times 1.0$$

### Example

Options: A, B, C, D, E, F

Correct answers: A, C, D

Calculation:

$$\text{Score} = (3 \div 6) = 0.5$$

Thus, the score reflects the proportion of correct answers relative to the total number of available options.
